About CryptoCurious

Web 3.0 Basic Security - Keep your Crypto Safe

Getting started in Web 3.0 is confusing at best, somewhat terrifying at worst. Don't fret, CryptoCurious is here to help you figure out what to do and how to set yourself up for Web 3 success.

You will learn:

- Best practices for setting up any crypto account
- Basic Security for navigation
- Mitigate risk of getting scammed
- Best practices to keep your crypto safe (from bad actors AND yourself)

Create your crypto wallet and learn how to transact

In order to actually dive into Web 3.0 you need a crypto wallet. Our hands-on workshop will walk you through creating and navigating your first crypto wallet, along side practicing how to transact by using the Rinkeby test net.

- This time you will learn
 - What exactly is a "cryptowallet"?
 - Types of wallets
 - How to create your wallet
 - Navigate to Web 3.0 sites
 - Verify transactions using the Rinkeby Testnet

PROMO

Virtual worlds and the future of work in the Web 3.0

What will our daily lives look like 10 years from now? The pandemic made it so we had to shift to remote work, allowing most of us to realize it is possible to work from our homes.

We'll talk about the possible use cases for the metaverse, virtual worlds and the role videogames may have in the future of our workforce.

PROMO

Web 3.0 and Decentralized Applications (english)

David Johnston is a serial tech entrepreneur and early contributor to the blockchain ecosystem since 2012. In May of 2013 he co-founded the first angel investment group in crypto, BitAngels, and in August of that year served as a Foundation board member to the first ever token sale - Mastercoin. In December of 2013 he authored "The General Theory of Decentralized Applications," which defined the "DApp" term for the industry. The following year, David co-founded the first crypto venture fund, the DApps Fund. In 2017, David was the first investor in Multicoin Capital, which today is a multi-billion dollar fund.
